

3'PIECE NESTING TABLE INSTALLATION DIAGRAM

01

Take the wooden board and the rectangular profiles that came inside the box and, as shown in the diagram on the side, place the profiles from the right and left sides of the board, upside down. Secure the profiles from underneath using screws.

Note: The most important aspect to pay attention to while assembling the product is aligning the top board's surface flush with the profiles' legs. Otherwise, the tables may become difficult to slide in and out of each other.

02

After screwing the tabletop in place, position the cylindrical profile that came in the box to the threaded holes on the right and left sides of the rectangular profiles, and then secure it with screws.

Products that have been assembled are not eligible for return.
